See the Present & Steer the Future with RastracVision!

The safety of your fleet drivers is paramount for any fleet manager. After all, your most valuable asset is the driver who represents your company and delivers a great customer experience!

But how can you mitigate and manage the risks associated with driving and operating fleet vehicles? There are so many dangers that factor into any route, including:

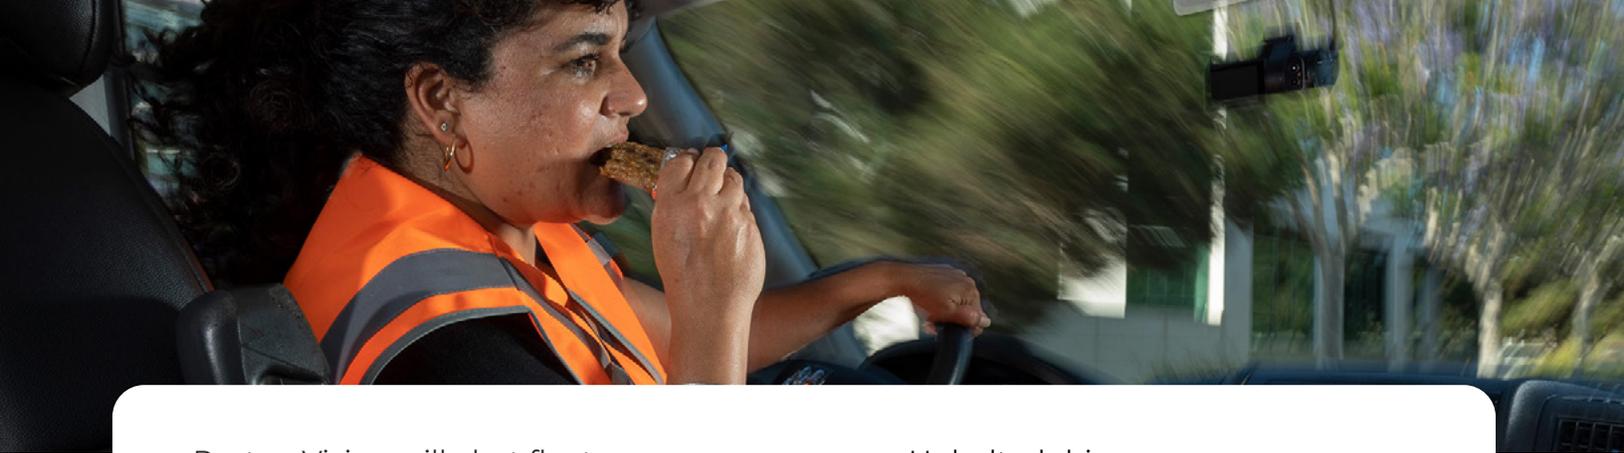

- » Distracted drivers, including your own fleet driver
- » Reckless drivers operating other cars on the road
- » Not having proof of how incidents play out
- » Drivers getting lost or rerouted unexpectedly

Out on the road, anything can happen—that's why it's important to be proactive and reduce risk where possible. With the power of **RastracVision**, a future-proof dashboard camera, you can see the present and steer the future.

What is RastracVision?

RastracVision is a revolutionary breakthrough in fleet safety and risk management. By leveraging the power of Machine Learning and Artificial Intelligence sensors, plus live-streaming video, risks can be anticipated on the road, drivers are incentivized to not be distracted drivers, and archived video footage can be used for safety training and forensic investigations of accidents.

This dual-camera device, with one aimed at the road and one inside the cabin (optional and can be turned off), installs in minutes and has multiple options to connect with a power source. Built-in battery capabilities will automatically detect if a collision is detected so that your fleet vehicle and driver are in safe hands.

RastracVision will alert fleet managers when a driver is taking a specific risk. These can be turned on and off as well, and include:

- » Drinking and eating
- » Smoking
- » Sudden acceleration, sharp turns, and harsh braking
- » Drowsy behavior
- » Lens obstruction
- » Tailgating
- » Using a handheld device

- » Unbelted driver
- » Distracted driving

Then a 10-second clip will then be uploaded to Rastrac to view and coach the driver.

Video telematics is the future of fleet tracking and risk management because it provides a live feed of your fleet.

Rather than worry if each of your drivers is practicing courteous driving skills and demonstrating focused driving, you'll be able to know for sure—and rest assured that RastracVision will audibly correct them with a warning if not.

Gain Insight Into the Performance of Your Fleet Drivers!

Telematics is essential for any effective fleet operation to run smoothly; with RastracVision and the power of GPS tracking, you can gain insight into the individual performance of your fleet with metrics including:

Arrival and departure times

Idling

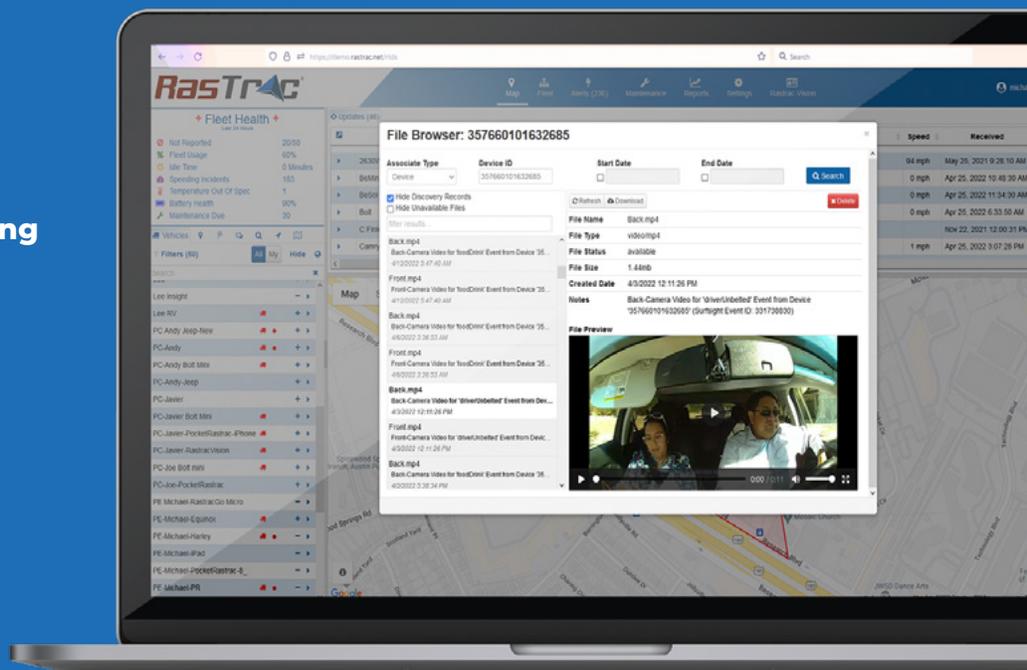

Geofencing boundaries

Instant driver location

Temperature tracking for sensitive cargo

Rastrac's team of fleet management and asset tracking experts are here to guide you through the process of GPS tracking—and how it can truly transform your fleet operations. Since 1993, we've been entrusted to track more than \$1.5 billion worth of assets around the world.

We know how invaluable driver safety is to your fleet and we're eager to demonstrate how **RastracVision** is a game changer for risk management. It's more affordable than you think; contact us today to learn more!
