

Automated Tracking Solutions for Boat Rentals

Keeping track of a fleet of rental boats and other powered watercraft is no easy task. Ensuring that your assets are treated properly by your customers, are not targets of theft, and are kept in perfect operating order can be extremely daunting. Not to mention the risk of inexperienced operators! This is where Rastrac relieves this tension for boat rental marinas.

Protect Your Investment

Rastrac allows you to create multiple geofences in areas of the lake where boat owners do not want their property to enter. When a boat enters any of these geofences, you and the renter of the boat receive a text message warning them to leave the area. If the boat does not leave the area, you have an option to trigger an alarm on the boat as an additional method to warn the renter to leave the area immediately. This not only protects your boat, but the lives of your renters and anyone in prohibited swimming areas. All of this may be viewed from a computer, smartphone, or tablet.

Prevent Future Breakdowns

- Track maintenance intervals to be proactive on service appointments
- Get automated reports on engine performance
- Schedule maintenance and inspection renewals by date and mileage
- Monitor battery levels, and receive alerts if it decreases to a determined level
- Optimize resale value

Monitor Activities

- Arrivals and departures
- Speed
- Location
- Verify where the boat was used in case of damage
- View lake depth information (if lake data is available)
- Versatile update rates
- 24-hour tracking
- Turns

Get real-time alerts and notifications on these activities
