

Automated Tracking Solutions for Generators

For companies that own or rent generators, protecting and extending the useful life of these assets through regular maintenance are among your top priorities. Generators are also expensive to replace when they are stolen or fall into disrepair. GPS tracking for generators help you to protect your assets in several ways.

Monitor Performance Remotely

- Monitor, manage, and control your operations using software that matches the way you work
- Track equipment on Google Maps or integrate your own
- Locate stolen generators

Safeguard Your Generators

- Get automated tracking that locates generators
- Receive alerts when generators are turned on/off, when fuel levels are low, battery voltage is low, the engine coolant temperature is too high or the level of coolant is too low
- Get a notification when an engine is over-cranking and failing to start

Get Better Data

- Understand which generators are idle and why
- Identify need for preventative maintenance: receive automatic reminders when quarterly and annual inspections are due
- Receive daily reports via e-mail and/or text message with status of each generator

Go With a Proven Leader

- Get ongoing access to upgrades that contain new features and updates to ensure compatibility with the newest computer hardware and communication systems
- Get support from an established innovator in tracking systems, backed by over 30 years and the tracking of over \$2.5 billion in vehicles and assets
