

StreetComplete

StreetComplete allows the user to monitor their fleet's progress on a real-time, color coded map that updates automatically. This powerful, versatile, and fully configurable tool can be used anywhere that specialty vehicles need to be monitored.

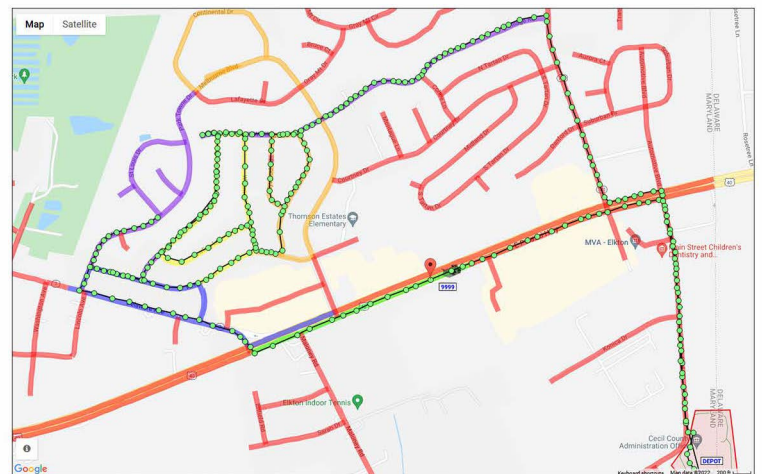

StreetComplete can monitor:

- Street sweepers
- Garbage trucks
- Snowplows
- Vacuum trucks
- Salt or sand spreaders
- And more...

How it works:

The user defines a set of colors and a timeline to show the progression of the vehicle as it completes its specific task. As the vehicle completes its job on a route, the map automatically changes the color of that route to show it has been completed. StreetComplete also has the capability to show when a task needs to be redone over time, as would occur in a continuous snow storm. It will change to the next assigned colors until it is revisited.
