

Automated Tracking Solutions for Refrigerated Containers

A cold storage system failure could result in hundreds of thousands of dollars' worth of lost products. When storing temperature-sensitive assets, owners need to ensure that these items remain at specific temperature levels throughout the day. This is where GPS asset tracking for refrigerated containers is a must to not only save money, but improve overall efficiency.

Manage and Watch Activities

- With different sensors, you have the ability to monitor temperature, humidity, Freon pressure, and doors opening or closing
- You are able to set your own thresholds to receive alerts whenever the temperature deviates

Get real-time alerts and notifications

Prevent Equipment Breakdowns

- Get automated reports on performance
- Identify need to preventative maintenance to reduce equipment damage and costly breakdowns

FSMA Compliance

- Temperature monitoring with automatic notifications if temperature should deviate from set thresholds
- Provide a report showing the temperature reading at every scheduled update with required data retention
- Improve your project management with reports that detail actual equipment performance and are based on real-time data to make fact-based decisions
- Additional features include monitoring defrost cycles, status of refrigeration unit, and the opening and closing of the door

Go With a Proven Leader

- Get ongoing access to upgrades that contain new features and updates to ensure compatibility with the newest computer hardware and communication systems
- Get support from an established innovator in tracking systems, backed by over 30 years and the tracking of over \$2.5 billion in vehicles and assets
