

Automated Tracking Solutions for Watercraft

Keeping track of a watercraft fleet is no easy task. Ensuring that your assets are treated properly by your customers, are not targets of theft, and are kept in perfect operating order can be extremely daunting. Not to mention the risk of inexperienced operators! This is where Rastrac relieves this tension for watercraft rental marinas.

Protect Your Investment

Rastrac allows you to create geofences on bodies of water where watercraft owners do not want their property to enter. When a watercraft enters any of these geofences, you and the operator of the watercraft receive a text message warning them to leave the area. If the watercraft does not leave the area, Rastrac can automatically trigger an alarm on the watercraft as an additional method to warn the operator to leave the area immediately. This not only protects your watercraft, but the lives of your operators and anyone in prohibited swimming areas. All of this may be viewed from a computer, smartphone, or tablet.

Prevent Future Breakdowns

- Track maintenance intervals to be proactive on service appointments
- Get automated reports on engine performance
- Schedule maintenance and inspection renewals by date and hours
- Monitor battery levels, and receive alerts if it decreases to a determined level

Monitor Activities

- Arrivals and departures
- Speed
- Location
- Verify where the watercraft was used in case of damage
- View lake depth information (if lake data is available)
- *Get real-time alerts and notifications on these activities*
- Versatile update rates
- 24-hour tracking
- Turns
